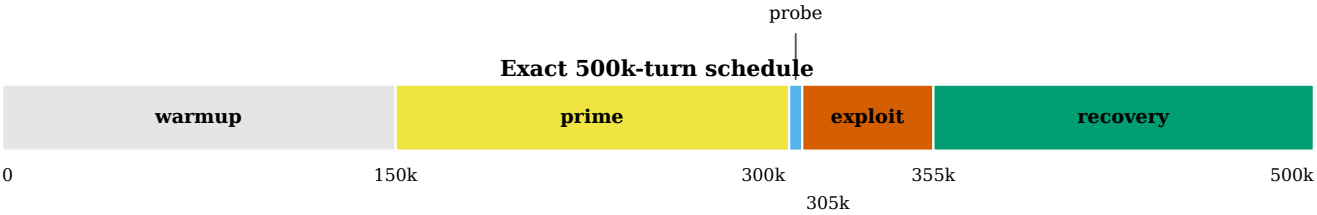
Physical Prime-and-Probe controller: ordered phases and information boundary



PHASE	EVE ACTION	ALICE / NETWORK RESPONSE	LOCAL RECORD / DECISION
Warmup (150k)	No intervention	Learns physical route service	Late-warmup reference
Prime (150k)	Deny selected alternatives; spare T	Policy mass can move toward T	No local probe record
Probe (5k)	Measure target resource T	Learner continues updating	Integer local count C
Exploit (50k)	Deny T if triggered	Target-family service is suppressed	$L(C) > p_T^{\text{uniform}}$
Recovery (145k)	Withdraw intervention	Policy and service re-adapt	Sustained return to reference

ONLINE EVE RECEIVES

Topology and declared intervention bank
Own selected actions and local probe count C
Count-calibrated target-mass interval

NOT AVAILABLE TO THE TRIGGER

Alice's policy, weights, or route identity
Target-active state or sampled route history
Independent audit split
