Cernet mitigation trade-offs under the same physical commitment
(a) Monitoring cost and application yield
Application reward per total request budget
Monitoring-request fraction
Clean
Detect only
Fixed 5%
Adaptive 2→20%
Adaptive + restart
4-outcome detect + freeze
(b) Residual steering and Eve utility
Attack-window Eve public utility
Final intended-route policy mass
Tsallis-INF (RV, η=1)
LinearExp2 (G-optimal, η=2)
